

On the Role of Sensors in Providing Safe Drinking Water

Benoit Barbeau

*Department of Civil, Geological and Mining Engineering
Polytechnique Montr éal
Montreal, QC*

The emergence of novel on-line analytical tools is challenging the traditional approach to water quality management which relied heavily on manual sampling. The presentation will review and discuss the benefits of these technologies but also the challenges related to their successful implementation in municipal drinking water systems. The presentation will cover issues related to source water, treatment as well as distribution system.
